research mandated by the public and funded by public donations. We have interest and do not engage in industry-funded work.

The MHRA describes the purpose of its Yellow Card system as providing “ar the safety of a medicine or a medical device may require further investigati people to report problems experienced with medicines or medical devices ; identify issues which might not have been previously known about.”¹ Furtl recognises that the conditions under which medicines are studied in clinica how the medicines will be used in hospitals or clinical practice once they ar means that some adverse drug reactions “may not be seen until a very larg

The COVID-19 vaccines were rolled out in the UK on the 8th of December 2021 nearly 39 million people have received their first dose of the Covid-19 million both doses. Sufficient data have now accumulated to get a good over

drug reactions (ADRs). I would, therefore, like to draw your attention to the covid-19 vaccine-attributed deaths and ADRs that have been reported via t between the 4th January 2021 and the 26th May 2021. In total, 1,253 deaths (256,224 individual reports) were reported during this period.

To facilitate a better clinical understanding of the nature of the adverse eve primarily to inform doctors at the frontline, we have searched the Yellow C pathology-specific key words to group the data according to the following f relevant categories:

Using these search terms, 13,766 bleeding, clotting and ischaemic ADRs were identified, of which 13 were fatal. Government reports have highlighted the occurrence of cerebral thrombosis, apparently accounting for 24 fatalities and 226 ADRs up to the end of 2020. However, our analysis indicates that thromboembolic ADRs have been reported in both vein and artery, including large vessels like the aorta, and in every organ including the brain, lungs, heart, spleen, kidneys, ovaries and liver, with life-threatening consequences. The most common Yellow Card categories affected by these ADRs were the nervous system (152 fatalities, mainly from brain bleeds and clots), respiratory system (152 fatalities, mainly from pulmonary thromboembolism) and cardiac categories.

asthma

To the 26th May, a total of 54,870 ADRs and 171 fatalities fell into this category, making it the second most common cause of post-vaccination fatalities after 'Bleeding and Ischaemic ADRs'. However, only 4 associated fatalities were reported under the 'IMMUNE DISORDERS' category, with the majority (141 fatalities) associated with the 'INFECTIONS' category. Among 1,187 people for whom COVID infection was reported, there were 72 fatalities (6% of reported COVID cases).

Many 'INFECTION' category ADRs indicated the occurrence of re-activation

Bell's palsy, also associated with latent virus re-activation, is reported in the section of this report (D). Also suggestive of vaccine-induced immunocomp number of immune-mediated conditions reported, including Guillain-Barré 6 deaths), Crohn's and non-infective colitis (231 ADRs, 2 deaths) and Multiple ADRs).

Allergic responses to the vaccines comprised 25,270 reported ADRs, with 4 among 1,001 people experiencing anaphylactic reactions.

C. 'Pain' Adverse Drug Reactions

We used the following SEARCH TERMS to identify pain ADRs: **pain, -algia.**

Pain ADRs accounted for at least 157,579 ADRs (18%) in total. A large number of arthralgias (joint pains – 74,907 ADRs) and myalgias (muscle pains – 31,168

D. Neurological Adverse Drug Reactions

In addition to examining ADRs in the **NERVOUS SYSTEM DISORDERS** (categories) following SEARCH TERMS to identify neurological ADRs specifically involving neurological degeneration, and convulsive ADRs as follows: **(paralysis), peripheral neuropathy, incontinence, Guillain-Barre, Miller Fisher, multiple sclerosis, encephalopathy, dementia, ataxia, spinal muscular atrophy, delirium, Paroxysmal convuls, seizure, fit, -lepsy**

Twenty-one percent (185,471) of ADRs were categorized as Nervous System

ADRs). Other ADRs involving encephalopathy (18), dementia (33), ataxia (3), atrophy (1), Parkinson’s (18) and delirium (504) may reflect post-vaccination pathology.

The majority of fatalities associated with Nervous System ADRs occurred as nervous system haemorrhages – 127 fatalities out of the 186 fatalities reported
